Sensus Connected Touch

Ch -204008

Op. No.: 39322

With Volvo's unique Sensus Connected Touch the car's 7" screen is changed into a connected media centre with touch function. The¹ Surf the net, listen to thousands of radio stations, or play music from popular services like Spotify² and Deezer². Connect your 3/4G dongle to Sensus Connected Touch or share the Internet connection (WiFi) from your mobile phone and once connected to the internet the possibilities are endless. As well as using the touch interface the unit can also be controlled via the buttons on the steering wheel or in the centre console. In addition there is a voice controlled search function for music, that searches all sources that are connected to Sensus Connected Touch.

Via an intuitive touch interface you can easily access a number of applications with functions such as Internet browser, navigation, internet radio, music services, e-mail etc. Sensus Connected Touch is installed in the glove compartment and offers several inputs where you can connect external storage and sound and image sources.

All personal settings can be easily reset in the event of a change of ownership.

App starter starts apps automatically in accordance with preset settings. Select the apps that should always be active when you start the car, such as Spotify and iGo.

Weather app shows current weather information and a 7 day forecast. Other places around the world can also be searched and the weather or forecasts for them shown.

Streaming music services gives you access to thousands of tracks. With Spotify² or Deezer², which are integrated into the system, you always have access to your favourite music and your favourite artists. There is also the option to select an extra high "bitrate" for Spotify, giving you much better audio quality.

Internet Radio via services such as TuneIn and Live Radio, gives you access to thousands of radio stations from around the world.

Voice Music Search helps you to find your favourite artists. Tell Sensus Connected Touch who/what group you wish to listen to and get the results from all active applications.

Media Launcher has all the music sources collected under one icon. You can find music from USB, SD card or "line in" in a single location, which means considerably fewer icons in the start menu, making it easier to find what you want.

Internet browser³ with support for Java and HTML 5 gives you full freedom on the web and lets you surf all the pages that you normally visit.

Film clip app opens the web browser and takes you directly to You Tube.

Navigation is offered via several navigation applications. iGO⁴ and Autonavi⁴ allow you to navigate and zoom in and out of the map in both 2D and 3D. Navigation also works without Internet connection. Via Maps you can make extensive searches and also show text-based route instructions to your search results. Traffic information⁵ via Internet is included in iGO and Autonavi (5-year subscription) and warning of dangerous traffic zones⁵ can be added as an option. In addition, the traffic flow is illustrated in real time on the map. iGo does not support voice control.

Asteroid Market gives the facility to use the Internet to update the built-in applications directly in the system, without needing to visit a workshop. The system needs to be restarted in order for new apps downloaded from Market to be visible.

Service dealer locator locates the five nearest certified Volvo dealerships and also presents detailed information about them, as well as route guidance there.

WiFi Hotspot. Sensus Connected Touch creates a wireless Hotspot so that you can connect portable units to the Internet. This function is only available when a 3/4G dongle is used.

For cars with High Performance/High Performance audiosystem (Option code 832) and 7" screen
